

at the  of the matter

Help us raise funds for new
cardiac telemetry equipment
for YOUR Haliburton Highlands hospital sites

Telemetry is an observation tool that allows continuous cardiac assessment; it transmits information to a monitor at a nursing station, where nurses and doctors can continuously see how a patient's heart is functioning.

At the heart of the matter is the requirement for new upgraded equipment for both the Minden Emergency department, and for the Emergency and Acute Care departments in Haliburton.

We're halfway to our goal ... but we still need your help to make this equipment a reality!
